Though designed as a 2D drawing application, AutoCAD has grown to include various types of 2D and 3D drafting applications. (1) This article explains how to use AutoCAD to create floor plan drawing templates in the floor plan. Template is a template for drawing floor plans. Templates can be used for simple floor plans or for complex 3D drawings (Model in architectural drawings, drawing of furniture, buildings, etc.). AutoCAD supports floor plan templates. In this article, we will walk you through the process to create floor plan templates for AutoCAD. We will also walk you through the process to create basic floor plan in AutoCAD. We will create the basic floor plan design template using the floor plan tool, with extra settings to allow you to customize and save the template. After creating the floor plan design template, you will learn how to create complex 3D drawings and floorsplans and add detail to the floor plan. You can learn how to add text and graphical objects on the floor plan template. Prerequisite Basic Knowledge of AutoCAD. Basic Knowledge of floor plan. The used the Autodesk® AutoCAD® 2020 software. You can download it from Autodesk website, and license cost is \$959 for a single-user license or \$1995 for a team license, depending on the version. It's a layout of interior rooms in two dimensions that shows both a floor plan and the room's construction. Some call it as floor plan template, a floor plan template or architectural drawings. It can be created in AutoCAD or any other CAD software. When creating a floor plan template, you have the option of choosing the scale, style, and whether the template is 2D or 3D. The scale is the size of the drawing being drawn. Scale can be either in linear or angular. Linear refers to 2D drawing scale is measured in inches or millimeters. Angular refers to 3D drawing scale is measured in degrees. The style refers to the measurement of the measurement of the drawing, in which the distance between two perpendicular lines of any point of the drawing is the same.
