
MappergForMapinfo

Hi Kalu! Site Mapper is the best solution for me. I use it to create maps in my project. I don't actually use the code that creates the map, but I used it to quickly build the map and then upload it to the server. I would like to get a map from my server so that I can use it in another project using this map. I'm currently trying to update a map with the map() method on my server, but that doesn't seem to work. I use I installed this, but when I run "map -o" I get an empty map.
