## Rslogix Emulate 5000 V20.01

hello, i am really confused now, i have the five v20.01 simulators on my pc, the one i was testing was the standard version, that was running on my pc and then i downloaded the rslogix5000 program that i am now testing on rslogix5000 simulator that is on the same pc. i have configured the processor and matched the i/o cards and the program works fine on the rslogix5000 simulator, but when i tried to test it on the rslogix5000 program on my pc it cannot find the i/o card and the program is unable to read the virtual backplane. i have followed the rslogix5000 program configuration to the t on how to configure the i/o cards, so i am really lost. i'm getting ready to place my first order on-line, but i'm concerned about how to test the hardware. i have the cd in the package, and when i open it, it starts up the rslogix5000 simulators, but i can't get the rslogix5000 program to run. it says, "unable to read virtual backplane. please make sure that rslinx classic is intalled and virtual backplane drive is running." do i have the wrong version of the rslogix5000 program?

hello, i am having a problem running my rslogix5000 program. when i run the rslogix5000 program on the simulator it works fine, but when i run it on my pc it cannot find the virtual backplane. do i have the wrong version of the rslogix5000 program? i have a rslogix5000 program that i want to run on the simulators, but it gives an error message. the message is, "unable to read virtual backplane. please make sure that rslinx classic is intalled and virtual backplane drive is running." what is the problem?

## Rslogix Emulate 5000 V20.01

if you do not have a plc (most of the time we all dont) to test your logic, rockwell offers a hardware emulator, which is called the rslogix emulator (for allen-bradley plc that uses rslogix5000 version 29 and below) or studio 5000 emulator. this article focuses on how to remove rslogix emulate 5000. if you still want to remove rslogix emulate 5000 from your system, you need to follow the guide at remove software using the synaptic package manager. uninstallation is not hard but you may experience some problems if you do not know what you are doing. uninstallation of rslogix emulate 5000 can be an extremely frustrating task if done manually. especially if you have installed the software on a computer that does not belong to you. rslogix emulate 5000 can be stubborn and may not cooperate in the uninstallation process. if you are not familiar with the manual uninstallation process, then you may think the uninstallation process is impossible and would give up. but you do not need to worry anymore, as bluescreenview can remove rslogix emulate 5000 for you. it will ensure that you will not be left with any leftover files or registry entries after the uninstallation process. to begin, run the bluescreenview application, and click on the uninstall rslogix emulate 5000 button. to start the process of rslogix emulate 5000 uninstallation, choose the files you want to delete from the left pane of the main window. you can select all of the files if you want, or you can pick one or more of them. to clear the selected items, click on delete selected button. 5ec8ef588b
